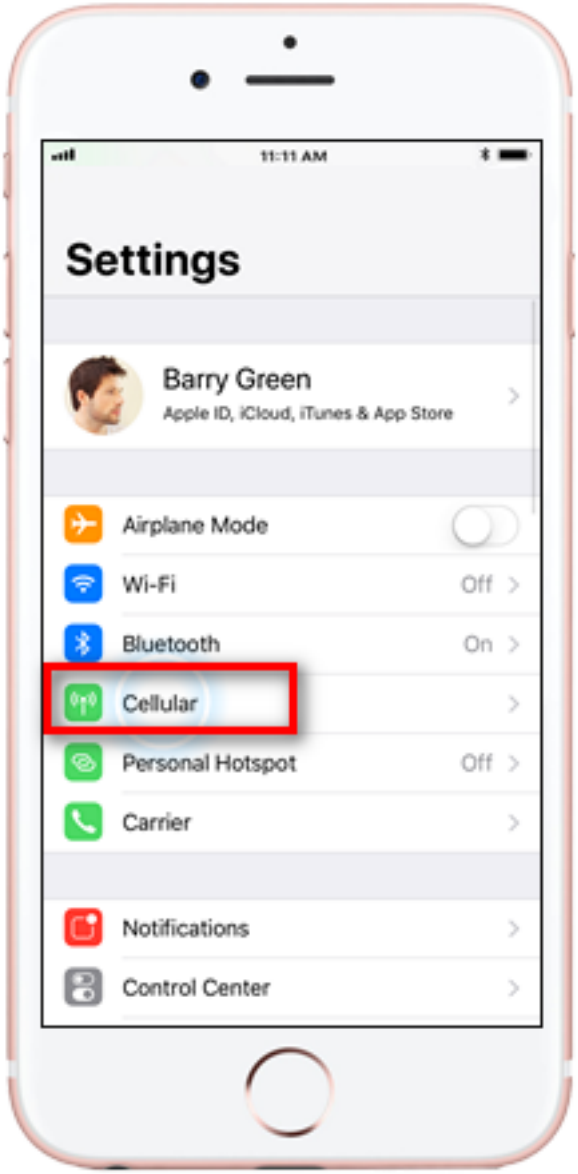
Internet settings

Your mobile should automatically acquire the APN settings required upon activation, but if you need to manually adjust the internet settings this guide will show you how.

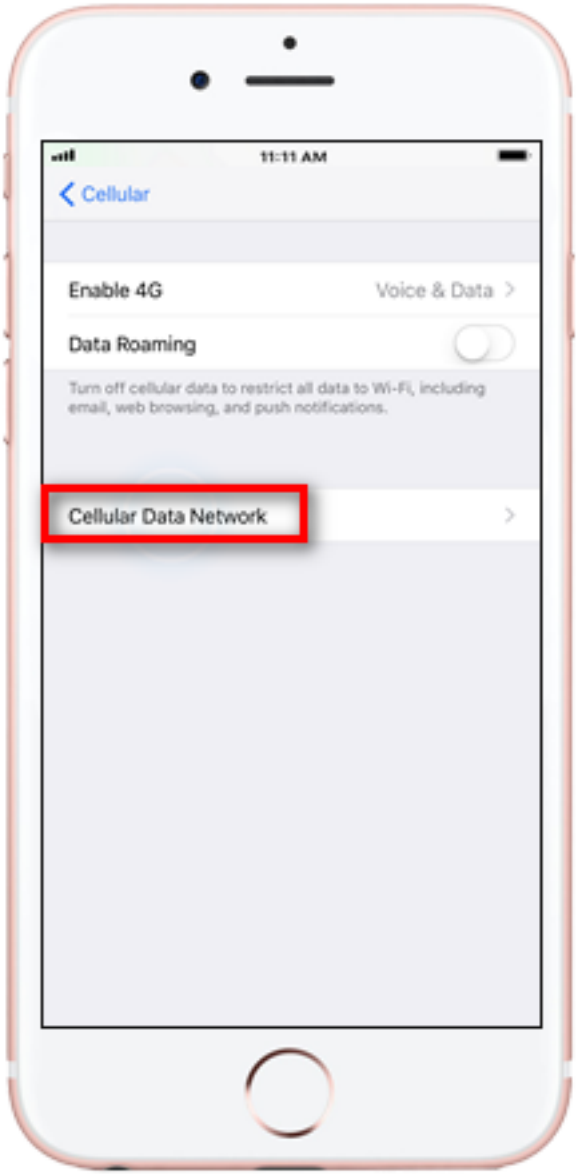
I have an iPhone, how do I setup mobile internet?

1. Tap **Settings > Cellular**

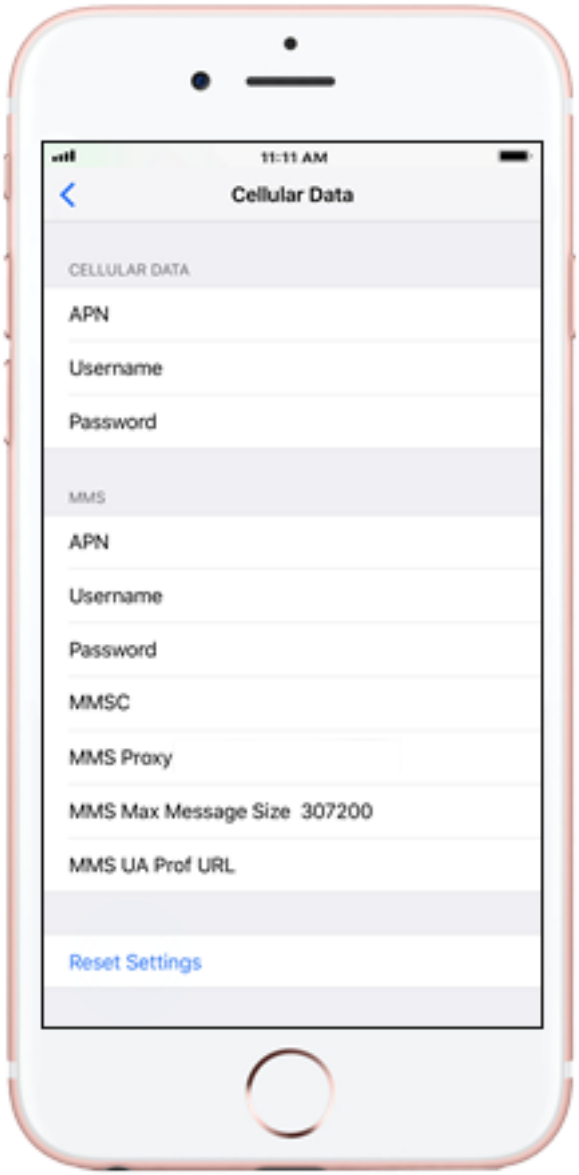


2. Tap **Cellular Data Options**

3. Tap **Cellular Data Network**



4. Tap **APN** and enter **YESINTERNET**



To finalise the changes, **Power off your iPhone** and switch it **back on**.

Note: Some iPhones may work without setting up an APN. This will only require you to **Reset Settings (under Cellular Data)** for the APN to be back on its default settings (i.e. iPhone 8, iPhone 6/6Plus)

I have an Android Phone, how do I set it up? (i.e. Samsung Galaxy S5/S4)

1. Tap **Settings > Mobile Networks**

2. Tap **Access Point Names > ADD** or **EDIT** Existing APN Setting
