

WiFi connection does not work With SpinTel Supplied Modem - NBN

Symptom

- Devices are able to connect to the WiFi network but unable to access any website.

Things to check first

- Confirm if able to connect using a wired connection.
- Confirm all devices are unable to connect to the Wifi network.
- If you are using the default SSID or WiFi name, check the base of your modem and make sure you are connected to the correct WiFi Name

Troubleshooting

1. Access modem gateway and check if the WiFi Name/SSID is the right one you are currently connected.

Manual Setup AP

You can set the network authentication method, selecting data encryption, specify whether a network key is required to authenticate to this wireless network and specify the encryption strength. Click 'Apply/Save' when done.

Select SSID: **WiFi Name**

Network Authentication:

Protected Management Frames:

WPA/WAPI passphrase: [Click here to display](#) **Click to display WiFi password**

WPA Group Rekey Interval:

WPA/WAPI Encryption:

WEP Encryption:

If you are connected to the correct WiFi name, try changing wireless credentials on the modem gateway or recreate WiFi connection by forgetting and inputting the password on the device.

Do the following below if you are not connected to the correct WiFi name.

- WiFi name/SSID is visible on the device
- WiFi name/SSID is not hidden in the modem's gateway unless you will

need to manually enter the username and password.
