

Can I set up a port forward using Carrier Grade Network Address Translation (CGNAT) IP?

Unfortunately, port forwarding is not possible using a CGNAT (Carrier-Grade Network Address Translation) IP address. CGNAT is used to conserve IPv4 addresses by sharing a single public IP address among multiple customers.

To port forward, you may specifically request to opt out of CGNAT, which you may agree to at our discretion. **When opting out of CGNAT, a dynamic Public IP address will be assigned to the service, however, at a cost of \$5 monthly on top of your service plan.**

You may also request a Static IP address for **\$11 monthly**.
