

What is eSIM?

An eSIM is exactly what it sounds like: an electronic or embedded SIM. There are no physical SIM cards involved, and no physical swapping over is required. Instead of a physical card, SIM technology is built right into your phone. You can download a digital eSIM from SpinTel and connect without a physical SIM card.

The eSIM advantage

With the ability to use up to two different numbers with an eSIM and a physical SIM on the same device, it's easier to manage your business and personal calls without carrying another device. Manage, add or make changes to your service all from your phone.

Ordering a service with eSIM

You'll be able to select between a standard SIM or an eSIM when you order your new service. If you're an existing customer, you'll soon be able to order a replacement eSIM (instead of a SIM if you have a compatible device).
