

# TP-Link HX510 Set Up Guide - Wirelessly

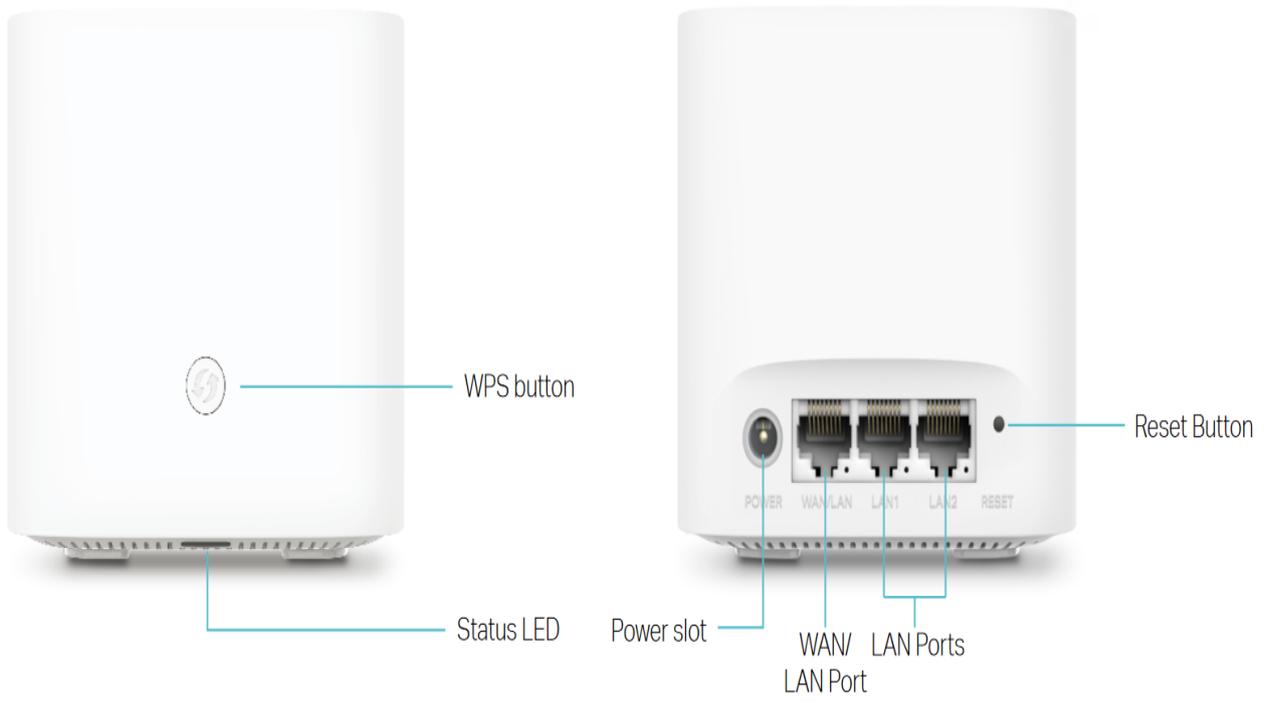

The Whole Home Mesh Wi-Fi AP system is designed to extend your network coverage across your entire home. It consists of a Main AP that connects to a wired router, modem, or gateway, and one or more agents that extend the wireless coverage.

Empowered by EasyMesh technology, HX510 provides a strong WiFi signal in every corner of your home. Wireless connections and optional Ethernet backhaul work together to link each unit, providing even faster network speeds and truly seamless coverage with one WiFi name.

Click to expand each section and discover detailed information on the HX510, including setup guides, features, and troubleshooting tips to help you maximise your device's potential.

## **Appearance**

The device features an LED that varies in behavior based on its operational status and is equipped with a WPS button, three RJ-45 Ethernet ports, a power port, and a RESET button.

## Understanding the LED Status

## Setting Up TP-Link HX510 AX3000 Whole Home Mesh Wi-Fi

**HX510** is designed to work alongside your VX230v Modem or any EasyMesh-compatible modem, allowing it to act as an additional Mesh device.

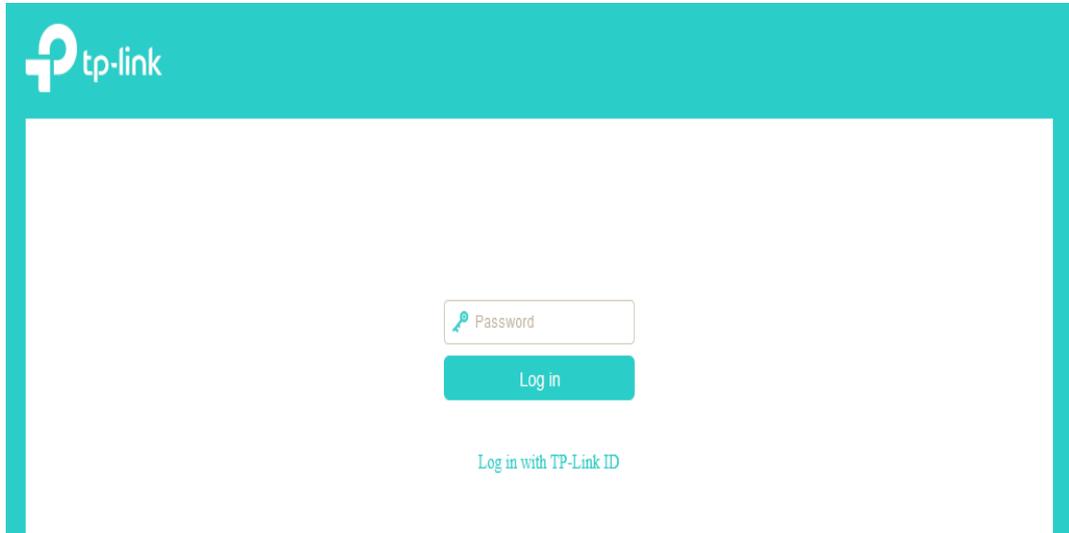

For a visual guide on setting up the HX510, watch the video below. You can also follow the step-by-step instructions provided further down.

### Step-by-step guide on how to set up HX510 Mesh Unit Wirelessly

1. Access your TP-Link VX230 modem by typing in <http://tplinkmodem.net/> or <http://192.168.1.1/> on a web browser and

log in with the password you set for the modem.

The default password is **admin1**.

Alternatively, you can log in using your [TP-link ID](#).

2. Once logged in, go to **Basic** > **Mesh** and make sure EasyMesh is enabled.

### EasyMesh

Connect EasyMesh devices to create a mesh network for seamless Wi-Fi coverage and centralized management.

EasyMesh Enable:

Note: WPA3-Personal and WPA2-Enterprise are unavailable since EasyMesh doesn't support these security types.

What's EasyMesh?

EasyMesh implements a standards-based approach, combining easy-to-use, self-adapting Wi-Fi with a flexible design, easy setup, and enhanced network intelligence. In an Mesh network, your mobile device will seamlessly switch between the main Router/Gateway(Controller) and Agents, provides the optimal Wi-Fi connection as you move through your home.

Common Network

### EasyMesh Controller

Use this device as an EasyMesh Controller if:  
This device acts as a gateway that directly connects to your ISP network, or  
You already have a gateway that doesn't support EasyMesh.

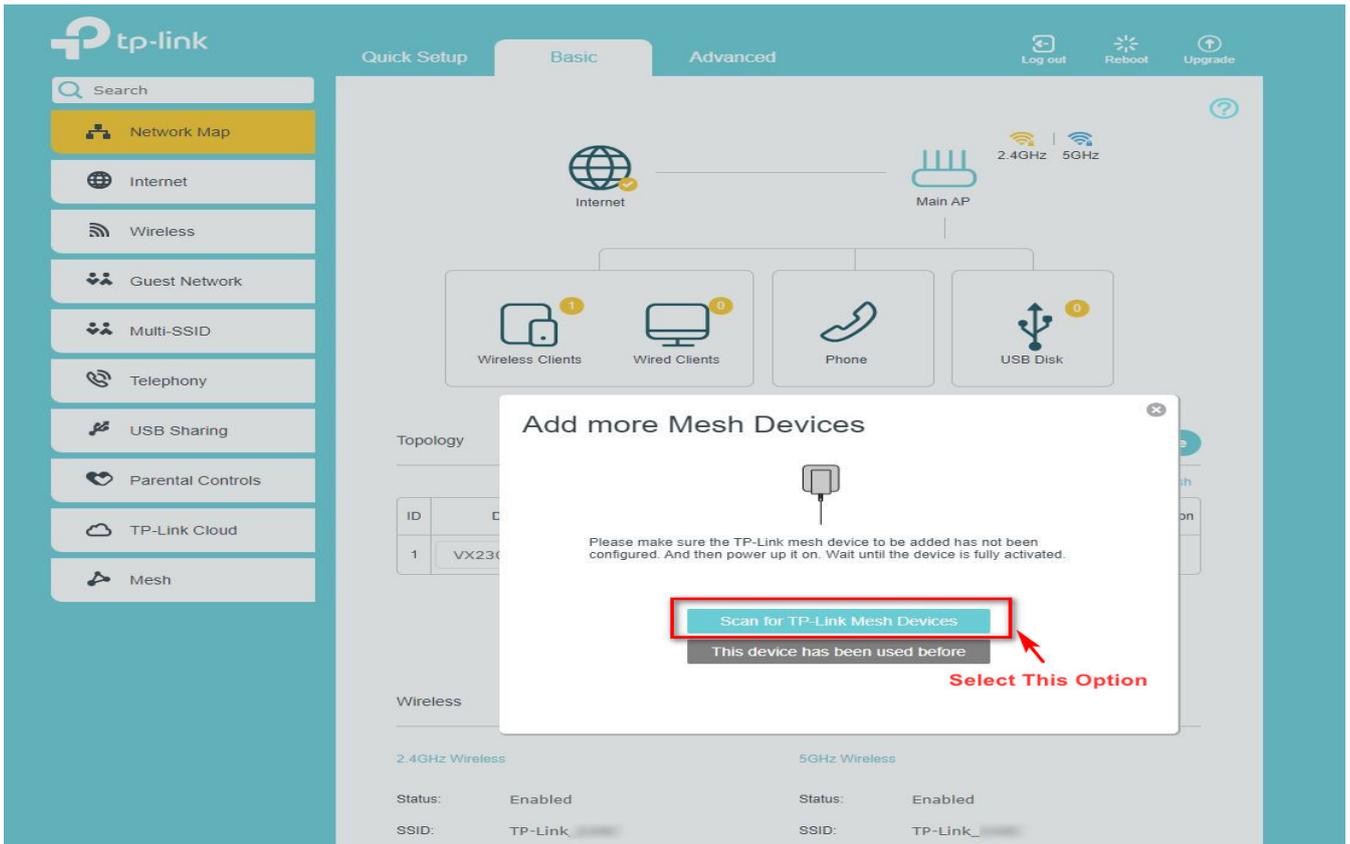

In this case, click "Add Mesh Device" to build EasyMesh network.

3. Next, go to Network Map and click on **Add Mesh Device**

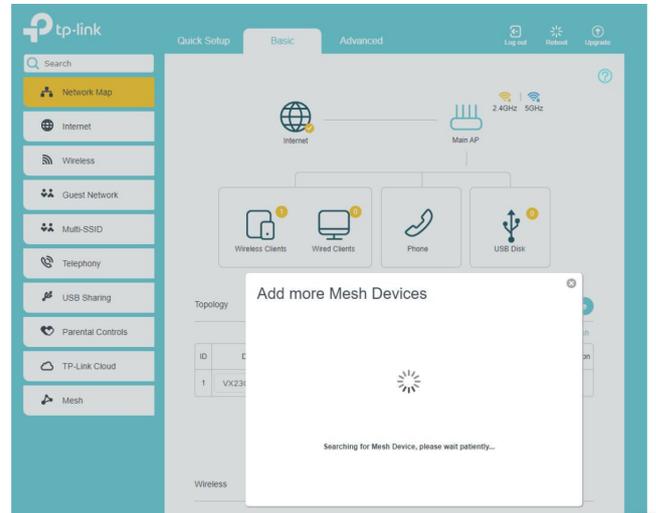

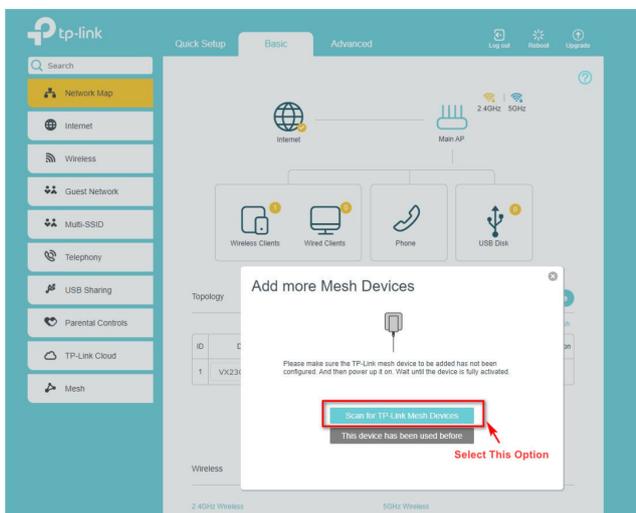

The screenshot displays the TP-Link web interface. The top navigation bar includes 'Quick Setup', 'Basic', and 'Advanced' tabs, along with 'Log out', 'Reboot', and 'Upgrade' buttons. A left sidebar contains a search bar and a list of network management options: Network Map, Internet, Wireless, Guest Network, Multi-SSID, Telephony, USB Sharing, Parental Controls, TP-Link Cloud, and Mesh. The main content area shows a network topology diagram with 'Internet' and 'Main AP' at the top. Below the AP are four categories: 'Wireless Clients' (1), 'Wired Clients' (0), 'Phone', and 'USB Disk' (0). A red arrow labeled 'Click' points to a blue 'Add Mesh Device' button, which is circled in red. Below the diagram is a 'Topology' section with a 'Refresh' button and a table.

ID	Device Name	IP Address	MAC Address	Connection Type	Signal Strength	Link Rate	Operation
1	VX230v_	192.168.1.1		--	--	--	--

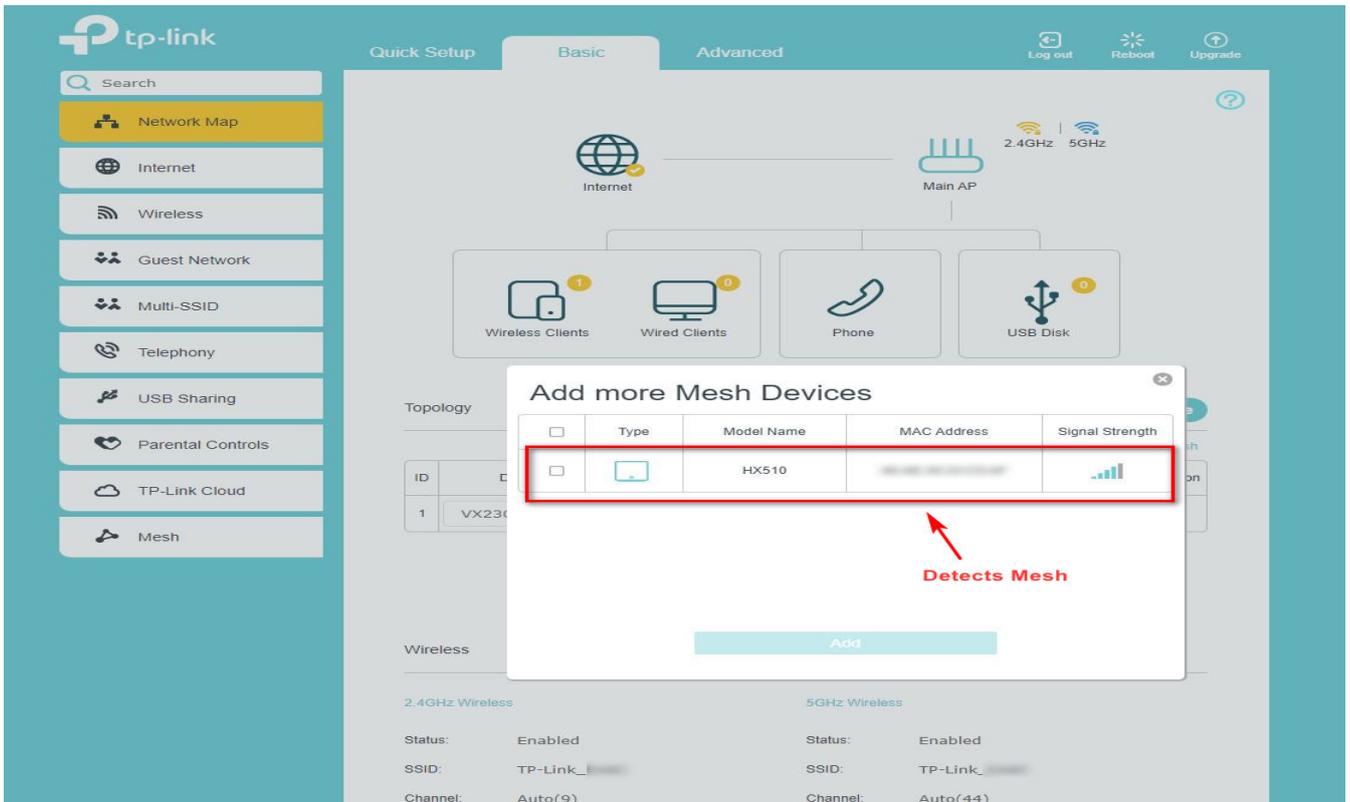

#### 4. Select Add By Scanning

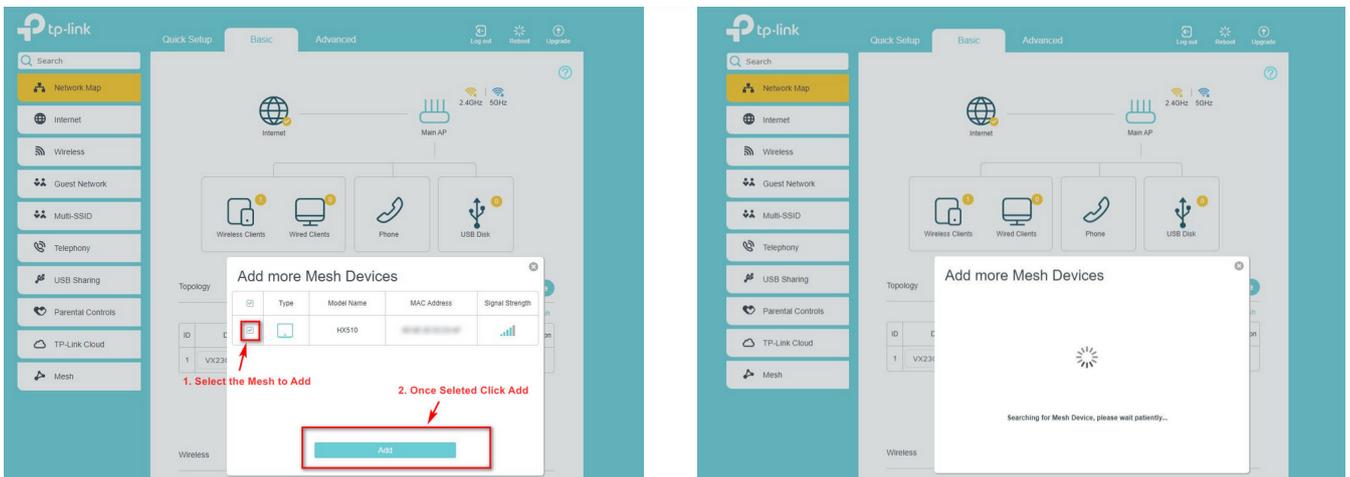

## 5. Click Scan for TP-Link Mesh Devices

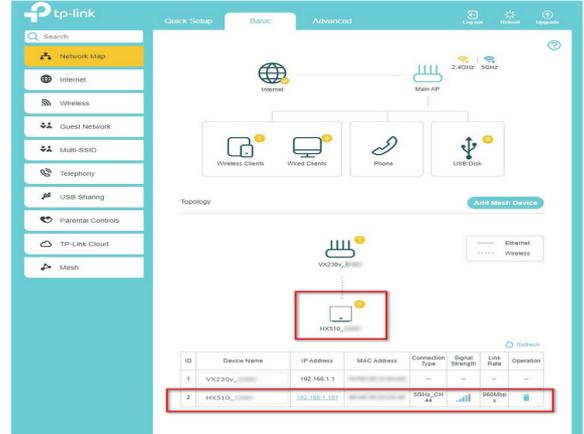

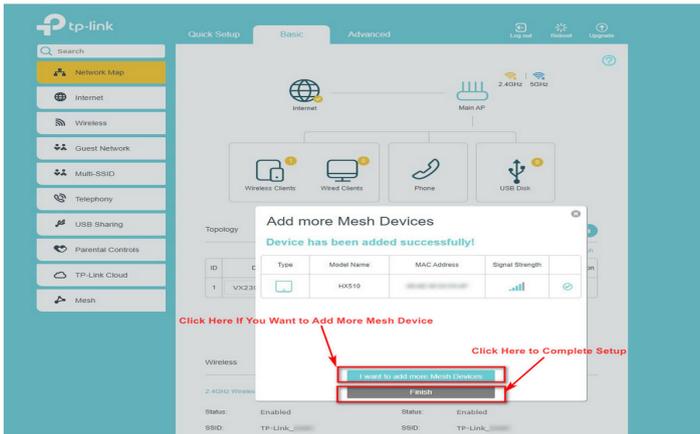

6. The detected mesh will appear as shown below.

7. Tick the box to add the Mesh then click the **Add** button.

8. Click Finish. Set up complete! You will see the added device as shown below.

## How to Remove the Mesh Device from your TP-Link VX230 Modem

1. Click on the trash icon as shown below.
2. Select Yes to completely remove the added Mesh device.

Are you sure to remove this device from easymesh topology network?  
This will reset it to its factory settings. Click Yes to continue.  
Unplug any Ethernet cables between the device and other Mesh devices.

2. Click 'Yes' To Remove Mesh

1. Remove Added Mesh Click Here

ID	Device Name	IP Address	MAC Address	Connection Type	Signal Strength	Link Rate	Operation
1	VX230v_...	192.168.1.1	...	--	--	--	--
2	HX510_...	192.168.1.101	...	5GHz_CH 44	...	1201Mbps	...

**To view the mesh devices and connected clients in the network:**

1. Go to Basic > Network Map.
2. Click the "Main AP" icon to view all mesh devices.

The screenshot displays the TP-Link web interface. The top navigation bar includes 'Quick Setup', 'Basic' (highlighted), and 'Advanced'. On the right, there are 'Log out' and 'Reboot' buttons. The left sidebar contains various settings: 'Network Map' (highlighted), 'Internet', 'Wireless', 'Guest Network', 'Multi-SSID', 'Telephony', 'USB Sharing', 'Parental Controls', 'TP-Link Cloud', and 'Mesh'. The main content area shows a network topology diagram with 'Internet' and 'Main AP' (highlighted) at the top. Below them are four categories: 'Wireless Clients' (1), 'Wired Clients' (0), 'Phone', and 'USB Disk' (0). A 'Topology' section below the diagram features an 'Add Mesh Device' button and a 'Refresh' button. A table lists the connected devices:

ID	Device Name	IP Address	MAC Address	Connection Type	Signal Strength	Link Rate	Operation
1	VX230\...	1...	...	--	--	--	--

3. Click the "Wired and Wireless Clients" icon to view all connected clients.
