# What Mobile Network Does SpinTel Use?

Our mobile, mobile broadband, and wireless broadband plans are powered by the **Optus Mobile Network**, which covers 98.5% of the Australian population, including capital cities, regional, and rural areas.

We provide both 4G and 5G services, depending on network availability in your area.

To check the mobile coverage available at your location, follow these steps:

1. Open a browser and go to https://www.spintel.net.au/coverage

2. Enter and select your address. From there, you will see what type of service is available in your area.

Coverage Layers - Outdoors

Standard 5G (non-standalone)
Fifth generation wireless technology provided through our non-standalone infrastructure. Offers quick response times between devices, seriously fast speeds and more capacity when compared to 4G, for customers with an eligible device.

4G
Fourth generation wireless technology, providing our widest coverage around Australia. Allows for fast speeds, HD TV on mobile and high quality video calls, for customers with an eligible device.
