

SpinTel mobile network and coverage

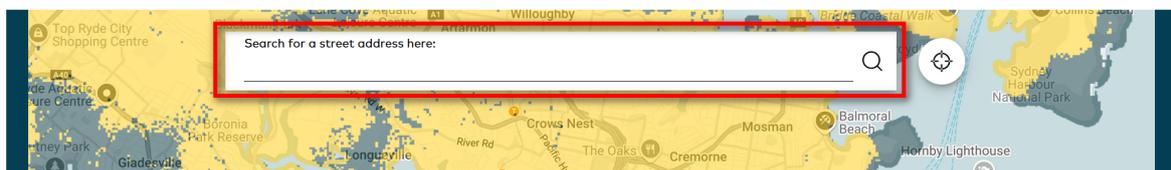

SpinTel's mobile plans are powered by **Optus** and offer high-speed data on your mobile. Learn what's the available network in your area below.

Checking your coverage

Simply visit the [SpinTel Website](#) and select **Coverage**, or you can also click [here](#) to go directly to the page, then enter your address.

COVERAGE MAP

Coverage Layers - Outdoors

Standard 5G (non-standalone)

Fifth generation wireless technology provided through our non-standalone infrastructure. Offers quick response times between devices, seriously fast speeds and more capacity when compared to 4G, for customers with an eligible device. >

4G

Fourth generation wireless technology, providing our widest coverage around Australia. Allows for fast speeds, HD TV on mobile and high quality video calls, for customers with an eligible device.

What is the difference between 4G and 5G?

In terms of applications, speed, latency, and technology, 5G is far better than 4G. You can expect faster speed in downloading, uploading, web browsing and streaming on the 5G network.

Generally, this isn't a choice you'll need to make since modern phones are designed to switch between available networks and find the best and fastest in your location.
